

ATTEMPTS AT PERFECTION ARE NECESSARILY INCREMENTAL.

AN IDEAL PRESENTS ITSELF ONLY IN SMALL STEPS accomplished exceptionally well and one by one. For more than 35 years Cobalt Boats has been engaged in an incremental, stepwise progression toward the ultimate bowrider, the perfect performance cruiser.

Because boat-building is an inexact science, its principles of design and construction allow room for interpretation, for the calibration of standards up or down. And so, in the adjustments of a thousand details, broadly different sorts of boats can emerge, albeit boats that at first glance might seem very similar indeed. This year we seek to remind you of the fundamental differences between a Cobalt and every other boat of its kind, differences that grow over time, differences that manifest themselves in dozens of ways of doing things better. We do so in a simple demonstration of value that will prove itself, boating season after boating season, in changing terms of comfort, togetherness and, on the very best days, an exhilaration that few people ever completely know.

We owe the remarkable people who own Cobalts ever greater enjoyment of their boats in the short term and ever greater value from their boats in the long. It is our responsibility to discover the raw materials, to refine the methods of manufacture that will result in ultimate performance for our customers.

But ultimate performance is not measured in a few big-water runs to the far side of a distant bay nor in a weekend or two with the kids laughing and hooting at the end of a tow rope. Cobalt has always taken the long view, down a thousand days on water that is not always smooth. And so we build enduring value into boats that perform season to season, year to year, generation to generation. Here is generalized value arising from the particulars of Cobalt's four decades in boat-building: a 36-year consistency in Cobalt ownership and consequent ideas about what constitutes a great boat, employees who live in a small Kansas community and bring to work every morning a rural work ethic, a dealer network predicated first to last on handshakes and personal integrity, warranties that lack any suggestion of fine print, and an ongoing demonstration of new principles of design, new applications of emergent technologies stem to stern.

Simple as that.

Cobalt standards of value are long term, but inevitably they manifest themselves in the short term. Year to year, Cobalt dealer surveys of customer satisfaction routinely earn scores approaching perfection. Cobalt has earned highest recognition in the three years of the J.D. Power and Associates Marine Quality and Performance Study of the large runabout category. Awards are nice, but ultimately Cobalts prove themselves in a Neodesha, Kansas philosophy of design and manufacture that accepts no compromises.

THAT SAID, LET'S LOOK AT THINGS FROM YOUR POINT OF VIEW.

We know that all the right reasons for **buying a boat** involve the heart far more than the head, but at the heart of the abstractions — classic styling, chest-pounding performance, unmistakable comfort — stands engineering. Engineering and design. The exhilaration of cruising in a Cobalt begins in calculation and craftsmanship. The why's of a Cobalt arise directly from the how's.

Do read on, please. In the pages that follow, we hope to show you how the decision to own a Cobalt speaks to your silent sense of what matters.

Of what, after all, lasts...

THE PRINCIPAL COMPONENTS OF A BOAT'S ENDURING VALUE ARE OUT OF SIGHT AND OUT OF MIND. BUT AT THE SAME TIME, THEY'RE OUT OF THIS WORLD.

- *Extended Running Surface*
- *Reverse Chines*
- *Fiberglass Stringers*
- *Composite Transom*

HULLS DEFINE BOATS. Since 1985, when we introduced an engineering achievement that has since become perhaps the most imitated component of performance in the industry, Cobalt hulls have defined control, stability, and responsiveness for runabouts and performance cruisers. Cobalt hulls create an "extended running surface," meaning that more of the hulls' surface stays in contact with the water at cruising speeds. The results: quicker planing, firm and true turns, minimized bow rise, and more lift at the stern. Cobalt owners often talk about their boats' remarkable ease of handling, and the extended running surface makes such accurate, reliable control possible.

Consider also reversed chines; they compound the benefits of the longer running surface. Standard on most models, the chines (longitudinal members of the hull) deflect spray downward, producing a drier running boat, with better tracking, and even more stability in tight turns.

The stringers on every Cobalt boat are wide, strong, and woodless for a quiet, exceptionally solid ride. Attached to the hull with Plexus (a material 10 times stronger than fiberglass), the stringers contribute significantly to Cobalt's ability to guarantee hulls and decks for a full decade.

At Cobalt we insist on all-composite transoms to ensure extra strength at that critical point. At two-plus inches thick, these transoms absorb all the torque of the drive system, isolating noise and vibration and ensuring the boat's integrity and longevity. Other manufacturers are content to use plywood here; at Cobalt we think the transom is the last place for cutting corners.

Because Cobalts always manage to do their jobs while looking exceptionally good, we pay particular attention to the boats' activity platforms. Cobalt activity decks are large, welcoming, and safe, with non-skid surfaces, integrated wet lockers nearby, with concealed ladders designed and built for extra-heavy duty. On some models an extended platform adds a second level of sun-filled enjoyment.

Again this model year, we're building Cobalts from the hull up, from a hull where every great day on the water begins.

"I'm concerned with tiny details, with little imperfections that most people would never notice. But I sign my name to every boat I work on, and so it's probably fair to say that I'm very, very prissy."

*Christy Shelton
Fiberglass Repair*

SOMETIMES
A PERSON'S BEST SELF IS REFLECTED
IN THE GELCOAT OF A NEW BOAT.

COMPARISONS CAN BE INSTRUCTIVE. Comparisons of Cobalts to other runabouts and cruisers can be positively eye-popping, most especially when their distinctions are reflected in Cobalt gelcoat.

Since our company's founding more than 35 years ago, we've understood that Cobalt's exclusive, multifaceted approach to fiberglass construction and gelcoat finish is fundamental to our boats' enduring, unquestioned value and to their performance and aesthetic appeal in the meantime.

THE FIBERGLASS FIRST.

Here's absolute dependability with no sacrifice of structural strength in one-piece construction of deck surfaces, interior side walls, and a floor reinforced with Nida-Core, a honeycomb synthetic that will quickly prove its superiority to either plywood or balsa. Unlike certain competitive models, there is no wood used in stringers, transoms, or exposed floors of Cobalts. Hence, no chance of rotting, no deterioration of structural integrity.

Cobalt's lamination schedule calls for eight layers of fiberglass mat and woven roving, each hand-laid, with overlapping double thickness at the keel, a total of 16 layers to fight fatigue throughout the structure. AME 1000 epoxy-modified resin in the skin coat enhances the lamination quality still more, adding superior strength, toughness, and resistance to chemicals and water. We use 100% polyester resin in the structural layers. Reasons why: significant gains in tensile elongation, tensile strength, and flexural strength, and a corresponding decrease in heat distortion.

Kevlar, does its part too. Applied in the chines, Kevlar combines matchless strength with minimum weight to dampen vibration and make the Cobalt hull tougher and more durable than virtually any other boat on the water.

An extra layer of protection, another Cobalt standard — the barrier coat — stands between the fiberglass and the gelcoat. This barrier coating rejects water vapor and prevents blistering and print-through. And the barrier coat's effects on the glass' finish are significant. Most importantly, all graphics are embedded in the gelcoat. No tape to crack and peel.

Cobalt is now applying, as part of our lamination process, a space-age product called Spraycor®, an additive that pays triple benefits: less weight, increased stiffness in the hull sides, and an extra-quiet ride thanks to muting of water-slaps.

Cobalt gelcoat offers superior reparability, matchless clarity, and high-gloss buffback. Greater flexibility in the Cobalt gelcoat reduces cracking. We're so confident of Cobalt gelcoat's superiority that we offer a comprehensive two-year warranty on the gelcoat finish against crazing, stress cracks, air voids, and blisters.

In ways both subtle and obvious, beauty in a Cobalt is way, way more than skin deep.

- *One-piece Deck Side Walls and Floor*
- *Nida-Core Honeycomb Floors*
- *Hand-laid Fiberglass Lamination*
- *16 Layers of Fiberglass at the Keel*
- *Kevlar Reinforced*
- *Gelcoat Graphics*
- *Barrier Coat Protection.*

"It's not that I don't trust the engineers' prints. It's just that the first time we build a part for a new boat, I like to hand-fit the part myself. To make sure we're dead-on, you know."

*Jeff Wright
Metal Shop*

BIG IDEAS. EXECUTED ONE ON ONE. IN A SMALL PLACE.

- *Aluminum Backing Plates Embedded in Fiberglass*
- *Stainless Steel Thru Hull Fittings*
- *Stainless Steel Rubrail*
- *Stainless Steel Bimini Top Supports*
- *Bow Scuff Plate*

PERHAPS NO DETAILS OF COBALT CONSTRUCTION SAY COLLECTIVELY MORE ABOUT THE OVERALL QUALITY of these boats built in Neodesha, Kansas than does their hardware. An obvious contributor to the overall style and grace of the boat, the hardware represents the ideal melding of Cobalt form with Cobalt function — so much of which never meets the eye.

Consider the aluminum backing plates on every Cobalt, plates that anchor every mounting point for hardware, from the entire windshield base to the side-rails, to the seat pedestals, to the swim ladder. Wherever exterior hardware adjoins the fiberglass, an aluminum plate lies embedded just below, tapped thru bolted fasteners to guarantee that bolts will not strip out, as is almost always the case over time with hardware mounted to fiberglass alone. Even larger plates anchor the seat bases. Stainless steel, electrochemically polished, is the material-of-choice in all thru-hull fittings. Cobalt's commitment to enduring value, to full boating enjoyment year after year demands no less.

Some manufacturers are content to use plastic in various applications. Cobalt employs materials that are far stronger, far more durable. In the engine vents for example: some stainless steel, some aluminum, but never, ever plastic. The rub rails too are heavy stainless steel for rock-solid protection from dock abrasion. But Cobalt differentiation does not stop with the selection of raw materials. Look at the hand rails: stainless steel of course, manufactured in-house as a single piece of steel — no joints to disengage. We're now bending all our steel in-house, ensuring dead-on accuracy and matchless strength for critical parts bow to stern.

And this year Cobalt introduces yet another industry first: solid adjustable supports are replacing the nylon straps heretofore typical on bimini tops. Stainless steel adds rigidity and quiet, quiet strength to the top. Ditto at the windshield where still more steel and a unique latching system stand straight up to hard use, high speeds, and rough water season after season.

Remember, too, that Cobalt was the first manufacturer to build into every boat a bow scuff plate, made of heavy-gauge stainless, to guard the gelcoat during trailering. Ski tows are retractable, flush with the deck, and mounted to structural steel supports; all Cobalt canvas is fitted to stainless steel frames for matchless strength and resistance to flexing. And there's not a scrap of aluminum, not a plastic fitting in sight.

The bar has certainly been raised. A bar built, it would seem, of stainless steel.

"I understand that a Cobalt owner would have to be down on his hands and knees to see that this particular seam on a dash panel might not be straight. But I'd know it wasn't right, and I'm simply not going to allow that to happen."

Stan Hayden
Upholstery

PUT YOURSELF AT THE HELM OF A GREAT BOAT

AND . . . FUNNY . . . EVERYTHING ELSE
JUST GETS LEFT IN THE WAKE.

No one can deny that Cobalt has raised the bar for boat-builders in the runabout and performance cruiser categories. We have also stretched the cockpit, enhanced the cabin, and increased storage capacity.

Cobalt interiors have always distinguished themselves by their spaciousness, their obvious luxury, and the exactitude and trim of finishes that only true hand craftsmanship can produce. The benchmarks of Cobalt design have evolved into the gauge by which other boats' interiors are measured: the next generation of the classic Cobalt parallel flip-lip design, a seat that lifts straight up, articulates, and slides into firm, comfortable above-the-windshield position for boating in the breeze; composite construction on all seats with dri-fast foam for immediate pass-through of water; hand-stitched, warranted, leather-like, stain-resistant vinyls with impregnated colors; wraparound upholstery double-fastened, both glued and stapled with stainless steel staples no less; solid acrylic walk-thru doors with heavy stainless-steel hinges and latches; stereo systems producing concert-hall sound, huge volumes of storage space, cavernous, convenient, and accessible with finishes as carefully completed as the open, public spaces on the boat; and ski lockers that are large and lockable, with gas-assist cylinders for fingertip opening and closing, rubber matting all around, and strong, unyielding locks.

Amid all these amenities, it's good to remember that a Cobalt electrical system stands behind the operational reliability of goodies. Experienced boaters know that the electrical system is the culprit in the majority of on-the-water difficulties, and so Cobalt pays extra attention to the positives and the negatives. Double circuit breakers protect the entire electrical system. Other boat-builders settle for automotive fuses, difficult to access and change out on the water; meanwhile, Cobalt's marine breakers can be reset with a simple push of a button. Waterproof connectors and tinned wire complete the circuit.

Cobalt helms represent the elegance of Cobalt design in an especially striking way, invoking uncompromised notions of utility, fit, and finish. With rich, hand-fitted upholstery over structural fiberglass — other manufacturers are content with plastic dashes! — Cobalt demands the same integrity of construction for the helm as for other Cobalt fiberglass components. The tilt steering wheel has become a Cobalt tradition, comfortable and reassuring, with the unmistakable feel of imported Italian leather, ready for smooth, easy control.

There is no plastic to be found in Cobalt dash panels either, where metals deliver uncompromising strength and long life beneath a brilliant baked-on finish. The dash's layout is logical and accessible; the instrumentation is a blend of the automotive and the aeronautical, quick in its power to inform, illuminated and weather-resistant, legible in the extreme. All gauge lenses are scratch-resistant glass; again, no plastic. Gloveboxes are large, often padded, with specialty touches in storage and convenience — a tray sculpted for a cell phone with an extra 12-volt receptacle, for example.

Altogether, interiors worthy of the people who ride in them.

- Parallel Flip-Lip Seats
- Composite Seat Bases
- Leather Wrapped Steering Wheel
- Gas-Assist Cylinders on Locker Doors
- Sony™ Audio

"We're preoccupied with owner safety and owner enjoyment of the boat. My responsibilities involve one last comprehensive check to ensure that the electrical and mechanical systems on every Cobalt perform exactly as they should."
*Kenneth Fulgium
Quality Assurance*

"My job is to keep my eyes open. I'm responsible for specific systems in the boat, but I'm looking for anything that might even be close to wrong."
*Bryan Schlegel
Quality Assurance*

UNTIL NOW, BOATS HAVE SO SELDOM BEEN PART OF ONE'S INVESTMENT PORTFOLIO.

- *Test Tank*
- *Statistical Process Control*
- *Daily Lake Tests*
- *10 Year Transferable Warranty*

AT COBALT WE KEEP OUR WORD. And our word is written all over our warranty. A warranty that no other manufacturer in the industry can match.

Because promises depend on performance, we work very hard to ensure that every Cobalt which leaves the plant is the very best it can be, that the warranty which protects it might never be needed. At every step of the manufacturing process, we build value into our boats.

And then we make certain. Statistical process control that monitors production of fiberglass. Calibration of the entire lamination process for ratios of glass to resin, correct pressures on spray equipment, resin temperatures, and catalyst percentages and cure time. Every Cobalt hull spends extra time in the mold through the full curing process to eliminate any possibility of warping. Statistical analysis are performed on raw materials to identify potential problems long before the construction process begins. Every Cobalt lead person empowered to reject work-to-date, to send a boat back for re-work. Every boat, bar none, goes in a test tank before leaving the factory, under power for half an hour while 30 critical systems are thoroughly checked. A daily lake test program that puts Cobalts through their paces in actual first-time use during a two-hour shakedown test of all systems on a nearby lake. (On-the-water testing is universal on all twin-engine Cobalts.)

And then one last quality-assurance station determines — at the end of all the design, manufacturing and hand craftsmanship, one last look at the boat “from the new owner's perspective” — if this boat is good enough to be a Cobalt. The Final Inspection team works from a long checklist of standards. The list has been worked hard in checks of mechanical systems and cosmetic detailing already completed. So the folks in Final Inspection roam over the boat, looking for any last little imperfection, for a minuscule scratch here, a tiny tear in the canvas there. Most importantly, the feedback from this last look at individual boats accrues to the production and inspection processes as a whole. This inspection of Cobalts, one by one, is helping us enhance quality-control for every Cobalt to come.

And so there come the warranties: 10 years against structural defects (floors, stringers, bulkheads, motor mounts, transom, and all hull and deck joints), transferable protection for the powertrain for five years (engine, stern drive, intermediate housing, gauges, steering, power trim and tilt, electrical, fuel delivery, and controls), two years on the gelcoat finish and all upholstery. First to last, Cobalt's warranty contains no fine print, no gimmickry. We do not hide. We do not exaggerate. We try always and everywhere to tell the truth. Simple as that. What's more, because Cobalt pays its dealers 100 percent of their shop rate, warranty work is undertaken with full enthusiasm, full attention to owners' ultimate satisfaction.

All Cobalt warranties are 100% transferable, thereby adding to the boat's marketability and resale value and lending an extra measure of confidence to its new owners. This full transferability remains in effect throughout the life of the warranty, regardless of the number of transactions in the meantime.

Here in southeastern Kansas we're building the perfect day boat.

200

Accelerate discovery.
Know from the start
all that boating can mean.

In the Cobalt 200 even the youngest families can learn from the outset the performance, the fit and finish, the comfort that — with other manufacturers — can be found only in far larger boats. The 200 is a remarkably efficient craft, incorporating luxury, convenience, and raw power in what has quickly become the preferred boat among first-time owners, owners who aspire to every nuance of the good life on the water. The 200 responds with enhanced fuel economy coupled with aggressive acceleration, with exceptionally tight turning response joined to a gentle ride, with tomorrow's boating technology born of the hand-craftsmanship that has defined Cobalts for well more than 30 years. Ultimately, the 200 speaks to value, enduring value involved both in splendid days under a welcoming sky and in retained equity when you decide to explore a bigger Cobalt. The determinants of such high resale value? Rock-solid Cobalt construction, first of all, and scrupulous attention to tiny details of style and plentiful, highly functional storage and glorious use of seating and sunning space and engine packages carefully matched to the boats intended uses and, finally, a no-nonsense transferable warranty which says that this 20-footer means Cobalt quality first to last. Captain, it's time to go fast.

220

Widespread public recognition of obvious strength, grace, and beauty is a wonderful thing.

In its second year on the water the Cobalt 220 has already built a reputation for athleticism, easy elegance, and an unmistakable sense of style. In fact, the 220 earned Powerboat magazine's designation as Runabout of the Year for 2003 where, like its sister ship the 200, the 220 was cited for its overwhelming value, its combination of build-quality, features, and performance at a price very comparable to competing manufacturers'. Here's a boat that stands up to serious fun – boarding, diving, a strong run to dinner across the bay – and all in the family will find something to like in the 220. G-force acceleration and concurrent fuel efficiency. Handling that smooths the chop and carves sweet, sweet slalom turns. For quieter moments the 220 brings along legendary Cobalt emphasis on luxurious appointments and superior workmanship: a helm station dressed with burl wood panels and a matching leather-wrapped steering wheel, cloud-soft gunwale padding, sculpted lounges and reclining backrests, a optional sunpad center cushion which removes to form a walkway to the cockpit, cavernous storage, a sound system to dance for; and an extended, easily removable swim platform. Take a bow, new 220

226

A great boat's
greatest gift comes in
the suspension of time.

Who can say when they might arrive, these idyllic minutes of unmistakable now? Minutes when work and worry slip away like the wavelets slapping soft against a perfect hull. The Cobalt 226 was made for such moments. It was made for friends and family, for endless rides at anchor. But with vigorous power options and classic Cobalt handling the 226 also rises to hard charges across big water, to enjoyments of the most active sort. In every case the 226 performs so effortlessly, so flawlessly that morning melds toward evening with not a thought to its passage. Credit Cobalt design: the matchless Cobalt extended running surface, reversed chines for drier and tighter turns, a long list of standard features — a wet locker at the swim platform, for example, and options that stretch from a discotechnical sound system to a ski tower with a bimini top. Amenities cluster in pockets of activity and comfort. Instrumentation is historic Cobalt in its cleanliness, accuracy, and straight ahead practicality. The contoured bow seating offers room and scope, as does the curved bench just ahead of a walk-thru transom. A concealed ladder port-side brings swimmers safely out of the water. Hour to hour, year to year, the 226 will answer the call of days exceptionally well spent. You may leave your watch at the dock.

240

Sometimes,
it's best to build a boat
from stern to stem.

Aft, the view is total. The vision lies fully out front, and there's just one way to go. With the 240, the good times roll large and forward, away from a platform that quickly shows itself a paradigm of utility. With easy access from the water and storage everywhere, the 240's activity platform invites skiers to stow their gear on-site. Tie-downs for tubes and other watertoys encircle the entire sun-loving deal. And, for all its functionality and multimission capability, the platform is removable in 30 seconds: two pins pulled, a quick slide, and an easy, two-person liftoff. At speed, the 240 is steady and strong, delivering all necessary adrenaline to boarders and skiers in wakes that maximize the hoo-hah, thanks to reversed chines and the exceptional stability and control resulting therefrom, most especially in turns tight and true. Ready to be tricked-out to your particular list of wishes, the 240 means an optional ski tower of steel-strength and stainless-handsoneness, a removable sunshade, premium sound systems of MTV proportions, and such gadgetry as transom showers, flagpoles, and air compressors. From the back of this particular boat, it seems your mom was right: there's no such thing as too much fun.

240SD

In the enjoyment of the best of times, the best of boats stands watch.

Marine memories are made in all sorts of ways. At speed with blue water ahead and white behind, of course, but also at anchor, the sand castle nearly complete, the architects content. The 240SD takes its initials from "sport deck;" it takes its profile from a hybrid place, a runabout for sure but with a deck boat's hull for smooth, easy beaching. With an overall design that means full-blown activity on the water from bow and stern alike, the 240SD takes family-based fun as its fundamental purpose in life. With all the versatility of an I/O outdrive, it pumps pure adrenaline toward boarding, skiing, and tubing exhilaration across north-shore wakes while maintaining extraordinary stability in the turns and hyper-safe control of the ride. Everything about the SD speaks of strength and integrity: an all-composite transom, an all-fiberglass stringer system and cockpit liner deck, a Kevlar®-reinforced hull, stainless steel windshield braces — all backed by what is undeniably the most vigorous warranty in the industry. The 240SD will surround and protect all that's most precious to you, even as it photographs you, and them, in the making of the remembrances of a lifetime.

How to search the geography of a dream? The 246 knows.

The 246 is a wanderer, a wayward navigator with no particular place to be, with every conceivable watery place to go. At once roomy and intimate, the 246 invites guests to gather, encourages the good times to begin. It's a study in multiplication, finding functional use for every cubic inch of space, bow to stern. At the marina, the 246 is a study in boating classicism. At an early evening rendezvous, it's the perfect excuse to be alone, to think about deeper meanings and multiple destinations. With a couple dozen MerCruiser and Volvo Penta power choices waiting to be dialed in, you can think big thoughts while you match horses to uses, to your usual boating activity, your waterborne wishes for an ever-better day. The optional equipment for the 246 represents meaningful extensions of possibility, maybe a stainless-steel ski tower with a bimini top and stereo speakers along for the ride. Trick out your 246 with personal choices that mesh seamlessly with the boat's overall design, its looks and its utility, from subwoofers to side curtains, air compressors to docking lights to those legendary Cobalt rosewood panels for the dash. Dream on, young mariners. Dream on.

250

*Muscular, meteor fast,
fearless, and totally in touch
with its feminine side.*

No boat should attempt to be all things to all people, but the new Cobalt 250 is democratic in a most widely appealing way. It loves both extreme sports and elegant suppers at sunset. It throws outrageous parties as easily as it floats solitary and silent in a blue lagoon. It blends all the spunk and nimbleness of a 20-footer with amenities typically found in 30-footers. Herewith: a generously sized head compartment, ice chests/jumpseats both port and starboard, a massive locker aft with removable dividers for customized storage of skis and all things smaller, and an extended swim platform with not two, but three levels for maximized convenience and accessibility. Notice too our new custom combinations of gelcoat and stripe colors (now available on most Cobalt models), a tricolor set of choices wherein all things are possible. Powertrain combinations extend the joys of ownership into still more arenas of what might be, as do long, long lists of exceptional standard and truly exceptional optional features that will make the 250 yours and yours alone. Whoever you are. Wherever you might go. Whatever you might wish to do enroute and on arrival. The 250, it would seem, is the total package.

Three Color Custom Graphics w/ Navy and Citron Yellow

Amid no-nonsense reliability,
amid safety and comfort
expect the time of your life.

The Cobalt 255 seems a bit much, doesn't it? We mean, with all its promises of performance and efficiency, of comfort and convenience, of short-term hoohadom and long-term resale value. The 255's cabin is quiet, sultry in its appointments, rich in its amenities. Designed to be a single unit of space and opportunity, the cabin creates an unmistakable sense of access and expanse. Everywhere there are details of design that belie the 255's size. On some boats, this sort of style, this level of efficiency might be called "luxurious. On the 255, they're called "standard equipment."

There are dozens of reasons to own a 255, many of them technical and non-glamorous: rattle-free doors maybe and everywhere storage and multiple platforms for waterborne fun aft. Many of them cosmetic and just for fun: fabric choices high in fashion, for example, or a glorious set of gelcoat colors or big engines that make the going wild and windblown all the way.

The 255 is a surprise package waiting to happen, a set of expectations waiting to be exceeded, a boat that combines practicality and personality. You're simply going to have to learn to live with it.

282

DELAWARE
BAY
CAPE MAY

Sunswept and solitary on an ideal evening, a good boat will show you your best self.

You've always been nimble. Ready for what's next. Much like the Cobalt 282. A bowrider at the top end of the runabout class, the 282 handles with all the agility and responsiveness of a smaller craft, but it insists upon much of the size and spaciousness of a cruiser. And hey! Function complements style; entertainment centers stand next to massive storage; Kevlar meets stainless steel, and a Cobalt settles in for the night. Look, and discover structural heft, all the details of fit and finish that have defined Cobalt boats since 1969, a built-in sense of fun, and room, Kansas kinds of room for family and friends and, when all is said and done, room to think. The raw materials of the ideal are here: meaningful power options, aircraft-like instrumentation, wood trim highlighting the dash, chest-pounding stereo packages, walk-thru doors at the bow and filler carpet at the aft walk-thru, a super-comfortable and double-wide helm seat, a convenient and highly serviceable galley unit, a pump-out Porta Potti, wraparound lounge seating, and an ice chest for crisp hors d'oeuvres all around. Tonight, the 282 will roar home in the wake of thousands of Cobalts designed and built with but one thought in mind, "Come aboard; the best is yet to come." Believe it, you.

*Little buddy,
gonna shut you down.*

For the moment, we're not sure what's come over us. We don't usually speak this way, but it seems that the Cobalt 293 inspires an attitude of sorts, a stirring certainty that — for its size — no boat on the water is flat-out bigger or badder. The first of Cobalt's cruisers, the 293 has always understood the meaning of "flagship." Extravagant in its notions of comfort, convenience, and performance, the 293 does nothing halfway. It's an extended set of major ideas executed with typical Cobalt understatement. Look here: classic lines borrowed from a time when boats defined a culture, ocean-going technology brought over from a time that looks just like tomorrow, and an exhaustive list of options on top of the most comprehensive list of standard features ever collected on a 29-footer. Approach the 293 from any judgmental aspect you wish, and it will show itself large, luxurious, and powerful, the logical culmination of 34 years of boat-building according to an ever-longer benchmark of your, and our own, devising. So, indulge yourself in some bravado and some hyperbole amid details of comfort and convenience that accumulate to a new standard of family boating. Meanwhile, the drag racing is entirely up to your better half.

SPECIFICATIONS

CANVAS OPTIONS

Color matched and hand fitted, Cobalt convertible tops and tonneau covers are made of Sunbrella® acrylic marine canvas. Sunbrella® is extremely strong, highly water repellent, and yet it breathes, so it resists rot and mildew.

Canopy Top - Standard equipment on the 226 and 246, optional on some other models.

Bimini Top - Provides protection from the sun with ample headroom to stand.

Ski Tower Sunshade - Removable from ski tower

Arch with Sunshade - For Models 262 and 263

Ski Tower Bimini Top - For use with Ski Towers. Will stow folded to tower.

293 Bimini Enclosure - Shown with 293's standard equipment bimini top.

Tonneau Covers - Bow and cockpit covers shown. (Not recommended for long term storage)

Mooring Cover - SharkSkin™ material is ideal for long term storage.

THE COBALT 100%
TRANSFERABLE WARRANTY
 OF UNCOMPROMISING ASSURANCE
 REMAINS THE INDUSTRY BENCHMARK.
